Creating Color Contrasts

Late-flowering Tulips are most effective in a Tulip border if clumps or blocks of 10 to 25 of each variety are planted. The four varieties which we picture above have been especially chosen for their distinct color and blooming qualities. These will make a pleasing color contrast. They may be arranged in the border in clump formation, the clumps so arranged at planting-time as to leave irregular spaces at the edges of the border in order that pansy plants may be set out in early April, to provide a pleasing low-growing border planting. The varieties featured above are illustrated in the following order:

CLARA BUTT. Beautiful clear salmon-pink. No variety offered by us has the same distinctive and pleasing color. Height 28 in.
\$1.20 for 10, \$10.00 per 100

THE BISHOP. One of the most outstanding Tulips at most exhibitions, and conceded the finest in its class whether grown in the border or in pots indoors. Best described as the purest heliotrope shade in the Darwins. A large, bowl-like flower of very artistic coloring. Height 30 in.
\$1.50 for 10, \$12.00 per 100

YELLOW EMPEROR. Rich deep golden yellow, darkening with age. The splendid form of the flower, its excellent substance, large size and long-lasting qualities make it one of the most desirable yellow Tulips. Height 30 in.
\$1.50 for 10, \$12.00 per 100

FARNCOMBE SANDERS. A bright shade of scarlet, with a clear white base, contrasting well when the flower is fully open. Broad-petaled flower of large size. One of the best among the less expensive reds for forcing or border planting. Height 28 in.
\$1.20 for 10, \$10.00 per 100

Our 50th Autumn Catalogue

THE BULB OUTLOOK FOR FALL 1946

The varieties of Flower Bulbs for Autumn Plantings which are now commercially produced in America, England, France, and Holland and offered in this Catalog are a much more improved list than those we were able to offer in our first catalog issued in the Fall of 1897. Specialists in many parts of the world have developed many new and beautiful varieties. We are glad to have participated in this improvement.

Reports we are receiving from our various producers of American, Dutch, English, and French bulbs indicate at this date, July 1, that the crops are very promising and that high-quality bulbs will be obtainable for the American gardener this fall. This catalog contains added varieties of bulbs which have not been listed by us since 1940, since the principal source of supply up to that time was Holland. Fortunately, we are now able to offer Dutch Hyacinths in a good list of varieties of which in the past we were able to get only a limited supply from England. The same is true of some of the miscellaneous bulbs, cultures of which did not exist either in England or in America. We were fortunate in being able to get French Northern-grown Candidum Lilies which were very short in supply during the war. Crocus bulbs, which usually begin the spring-blooming season of bulbs, are now obtainable in good quality and in good variety.

We are also very glad to report that many varieties of Daffodils and Tulips are in greater supply now at prices more favorable than those which existed during the past four or five years.

What some experts said about our green and white garden at the International Flower Show held at Grand Central Palace, March 1946:

STUMPP & WALTER COMPANY'S green and white garden at the International Flower Show scored three of the highest honors ever awarded in any Flower Show, to any exhibit of plant material, or any garden.

The judges on Monday awarded the silver trophy to this garden as the best in the four large garden class. Later the Chas. H. Totty Memorial committee also selected this garden as the most worthy of the Totty Memorial Medal. This medal is given each year in memory of the late Chas. H. Totty.

On Tuesday, the Garden Club of America awarded this garden the Bulkley Gold Medal. This medal is awarded on the recommendation of a group of judges selected by the Garden Club of America and is separate from the teams that judge the International Show. In other years the result of this arrangement sometimes resembled the findings collectively of the Pulitzer Committee, the New York Drama Group and the Oscar Award of Hollywood, in that opinion did not always concur. This year, however, all critics, judges and experts seemed unanimous in their decision that here is a great achievement.

OFFICIAL WORDING OF THE BULKLEY GOLD MEDAL AWARD

Because of the garden's simplicity, perfection and suitability of material and for its excellence in design and horticultural achievement.

ALL BULBS TRANSPORTATION PAID EAST OF THE MISSISSIPPI RIVER

Culture. Bulbs should be planted 5 to 6 inches deep and not less than 5 inches apart. One-half inch of sand at base of bulbs will amply repay the trouble by the provision for drainage during wet weather. For forcing, bulbs should be planted as soon as received, and the flowers appear to better advantage if pots a trifle deeper than the ordinary bulb-pans are used. We recommend what are termed azalea-pots for this purpose. A temperature of 55 to 60 degrees is recommended, for if allowed to "come gently," larger flowers and longer stems may be had.

Should we cover our Tulips? Tulips are the easiest of bulbous plants to grow. We advise, however, against covering them with any kind of mulch. In the first place, the bulbs do not require warmth. Mulches provide ideal nesting-places for field-mice which seem to like to eat the bulbs. In mild winters mulches encourage premature growth. Greater damage is done to Tulips by poor drainage than cold weather. Our suggestion is to make sure of a well-drained location for success with Tulips.

We have been testing for the past fifteen years approximately 400 new, rare, and standard varieties of Darwin, Breeder, and Cottage Tulips at our Islip Farm. After careful checking, we find the following eighty-nine varieties to be the finest procurable either in Holland, England, or the United States. In offering them to our clients, we do it with the confidence that comes from the knowledge that there are no finer varieties from the standpoint of color, size of bloom, substance of petals, length of stems or duration of bloom. The following list includes the best standard as well as the best new varieties:

ADMIRAL TROMP. Breeder. One of the newer Breeder Tulips, which will become more popular when better known. The general tone of the flower is a bright orange-red shaded salmon. Petals are of good substance and the blooms are large. Height 30 in. \$1.50 for 10, \$12.00 per 100

ADORATION. Darwin. A very lovely color and quite distinct—pale, soft flesh-pink with lighter edge and a white base. Very large, well-formed flower carried on a fine, strong stem. Height 28 in. \$2.00 for 10, \$15.00 per 100

ADVANCE. Cottage. A much-admired Tulip in our trial gardens. It is the result of a cross between Gesneriana spathulata and the botanical Tulip Greigi. One of the largest of all Tulip flowers, reminding one when fully opened of an Oriental poppy. The color is fiery red with a blue base. One of the earliest of the May-flowering Tulips. Height 32 in. \$1.75 for 10, \$15.00 per 100

AFTERGLOW. Darwin. Deep rosy orange with salmon shading at edges of petals; inside deep orange with yellowish base. A sport of Baronne de la Tonnaye, which is of remarkable interest because it is the first instance of a Darwin sporting to the Breeder tones. A showy Tulip for outdoors. Height 26 in. \$1.50 for 10, \$12.00 per 100

ALBINO. Cottage. A popular white Cottage Tulip which is largely used for early forcing. Excellent when grown from precooled stock. Height 24 in. \$1.50 for 10, \$12.00 per 100

Botanical and Species TULIPS

American gardeners are just beginning to appreciate the resources of the wild Tulips or species. A wide range of brilliant color is represented in their various forms, and they are permanent plants when once established. Being natives of southern Europe and western Asia, they are accustomed to hot, dry locations, particularly after blooming time, and should be given sheltered locations exposed to the sun, with the freest possible drainage. Do not fertilize the soil nor protect them; plant them very deep and leave them alone ever after. These Tulips are at home on steep, gravelly slopes or well-drained, sunny places in large rock gardens, but most of them are too large and too gorgeous for the tiny rockery. They bloom early and continue for many days. Plant them in clumps, not in serried ranks, and you will bless the day you bought them.

ACUMINATA (Cornuta; Stenopetala). This variety has very narrow petals, ending in a threadlike point at the top. The color is yellow, streaked red, very showy and attractive. Height 18 in.
\$1.75 for 10, \$15.00 per 100

\$1.00 for 10, \$8.00 per 100

CLUSIANA. The "Little Lady" Tulip. A lovely little variety which originated in Asia Minor. Grows about 8 inches high, with flowers as large as a crocus. Outer petals cherry-red, inner petals white with violet base. Should be planted 8 to 9 inches deep in light soils in a sheltered place. Excellent bulb for the rock garden.

\$1.50 for 10, \$12.00 per 100

KAUFMANNIANA. One of the earliest of all the Tulips to come in flower. Creamy white, tinged rosy red, the markings varying. The flowers are very attractive, large in size, with petals reflexing. Miscellaneous DAFFODILS

The Daffodil has inspired poets for centuries. It often makes the first noticeable splash of color in the spring garden, and the cheerful tones of its cream, yellow, and orange blooms seems to be a reflection of the warm sunshine. Combined with blue flowers such as the Virginia Bluebells shown here, Daffodils are especially pleasing. They bloom at the same time and each complements the other. Hyacinths, Grape Hyacinths, and other small bulbs are also splendid companions for Daffodils. Try planting a *picture* instead of just bulbs.

Cyclamineus and Cyclamineus Hybrids

Division 6. As dainty and interesting and as ideally suited for rock gardens as the Triandrus Hybrids. The trumpets are rich yellow, straight, and tube-like, with the perianth petals sharply reflexed as in a cyclamen. Very early flowering.

CYCLAMINEUS. Pure rich yellow little Daffodil beginning to flower in mid-February. Delights in damp spots in the rock garden, similar to its native habitat in Spain, where it is found bordering mountain streams and in flooded meadows. The perianth is very small and the narrow segments turn back along the stem.

35 cts. each, \$3.25 for 10, \$30.00 per 100

FEBRUARY GOLD. Earlier than the type, with golden yellow perianth and trumpet tinged orange.

35 cts. each, \$3.25 for 10, \$30.00 per 100

Jonquilla and Jonquilla Hybrids

Division 7. Under this class we have listed the Jonquil and its hybrids. They have a grace and charm that makes them extremely popular. The varieties Golden Sceptre and Lady Hillingdon are hybrid types and are the results of crossing the bunch-flowering Single Jonquils with the Trumpet Daffodils.

CAMPERNELLE RUGULOSUS. Beautiful, single, star-shaped flowers borne in clusters of 4 to 6; delicately fragrant. Much larger and finer than the old favorite Campernelle Jonquil. This is charming when used to border a path or in clumps against a large, dark rock in the lower region of the rock garden.

15 cts. each, \$1.20 for 10, \$10.00 per 100

CAMPERNELLE RUGULOSUS, DOUBLE. Double form of the Giant Campernelle Rugulosus. Large, double, yellow flowers very fragrant.

15 cts. each, \$1.20 for 10, \$10.00 per 100

GOLDEN SCEPTRE. This free-flowering hybrid is very handsome. Its fine, elegant flowers are a deep Jonquil-yellow, 3 inches or so in diameter. The perianth is star-shaped, just a shade lighter in coloring than the trumpet, which is slightly rolled and flaring at the mouth.

20 cts. each, \$1.50 for 10, \$12.00 per 100

JONQUILLA SIMPLEX. The true original single sweet Jonquil bearing clusters of small, rich yellow flowers in May; extremely fragrant. Many people apply the word "Jonquil" to the large, trumpet-flowered type which is the true Daffodil. Make no mistake about it, the genuine Jonquil is a small, very deep yellow flower, very sweetly scented, and always borne in clusters. The foliage differs considerably from Daffodils and other Narcissus because it is slender, grass-like and almost tubular, resembling that of some rushes.

15 cts. each, \$1.20 for 10, \$10.00 per 100

LADY HILLINGDON. Blooms earlier than Golden Sceptre. Usually cluster-flowering, but sometimes bears its blooms singly. The perianth is butter-yellow and the short, straight trumpet deeper yellow. Very tall and vigorous.

20 cts. each, \$1.80 for 10, \$15.00 per 100

Tazetta and Tazetta Hybrids

Division 8. Under this heading come the tender Polyanthus varieties and the hardy Poetaz, which are crosses between the Poeticus and the Polyanthus.

Poetaz Varieties

THE HARDY CLUSTER-FLOWERED POET'S NARCISSUS

Division 8. The chief characteristic of this type of Narcissus is that hybridizers, by crossing the strong-scented Polyanthus varieties with the Poeticus type, developed a hardy strain of Daffodil which has the bunch-flowered character of the Polyanthus with larger flowers similar to the Poet's described on this page. They are excellent for pot culture and the garden border.

EARLY PERFECTION. Perianth pure white; cup citron-yellow. Very early; an excellent variety for forcing and may be had in bloom in early January. 20 cts. each, \$1.80 for 10, \$15.00 per 100

GERANIUM. Very fine variety. Broad orange eye; solid white perianth. Very free blooming, excellent for forcing.

20 cts. each, \$1.80 for 10, \$15.00 per 100

MERTENSIA VIRGINICA (Virginia Bluebells). One of the finest blue perennials to plant with your Daffodils in the shrubbery, or among the trees. They bloom among the shrubs in April and make excellent color contrasts with white, yellow and red cup color of the Daffodils.

Extra heavy clumps, \$2.00 for 10, \$18.00 per 100

MUSCARI ARMENIACUM (Grape Hyacinths). The finest blue Grape Hyacinths to plant among Daffodils.

50 cts. for 10, \$3.50 per 100, \$30.00 per 1000

POETAZ VARIETIES, continued

LAURENS KOSTER. Perianth pure white, with soft yellow eye. Robust grower, and probably the best of the older varieties for general garden planting. 15 cts. each, \$1.20 for 10, \$10.00 per 100

ORANGE CUP. A really bright, sunny Poetaz. Perianth even yellow; cup bright orange. Greatly admired by all. 20 cts. each, \$1.80 for 10, \$15.00 per 100

RED GUARD. Sulphur-yellow perianth, with glowing orange-scarlet cup. One of the finest exhibition varieties, producing 2 to 3 flowers on a stem. 25 cts. each, \$2.25 for 10, \$20.00 per 100

SCARLET GEM. One of the newer Poetaz and a very attractive variety when grown in the garden. The perianth is primrose-yellow with a deep orange cup. A very artistic color contrast. 20 cts. each, \$1.80 for 10, \$15.00 per 100

Double Varieties

Division 10. The newer varieties of Double Daffodils are extremely handsome. The variety Twink was very much admired in our exhibits at the New York Flower Show. They make a fine display in the garden and are excellent for cutting.

CHEERFULNESS. This exquisite double Poetaz resembles a gardenia in form of flower and is one of the loveliest of all the double Narcissus. The bloom is made up of a creamy white perianth and a mass of cream-colored petals among which a few short orange petals are intermingled. The deliciously fragrant flowers, in clusters of 3 or 4, are carried on heavy, 10 to 12-inch stems which hold them firmly upright. A wonderful cut flower. 15 cts. each, \$1.40 for 10, \$12.00 per 100

DAPHNE. A large double flower of pure white, deliciously fragrant. Splendid forcing variety. 20 cts. each, \$1.80 for 10, \$15.00 per 100

IRENE COPELAND. A very distinct and fine variety. Double snow-white flowers with yellow segments borne on strong rigid stems. A very useful variety for forcing; flowers of excellent quality. May be had in the first weeks of February. 35 cts. each, \$3.00 for 10, \$25.00 per 100

MARY COPELAND. See page 16.

TWINK. Destined to be the most popular of Double Daffodils. Semi-double in type, with alternating petals of primrose and clear orange, each whorl of petals symmetrically centered over the other. It has none of the confused appearance common to older, inferior doubles of this class. Flowers very early in the garden and is particularly suited for forcing. Outstanding exhibition variety. 20 cts. each, \$1.80 for 10, \$15.00 per 100

Miscellaneous Daffodils. The Poet's Narcissus (NARCISSUS POETICUS)

Division 9. These Narcissus, instead of having a trumpet or crown, have a small, wide-mouthed cup. They are very hardy, and are used in large numbers for naturalizing, their simplicity of form and the refined character of their blooms making them excellent flowers for cutting.

ACTAEA. The largest and most beautiful of the new Poeticus. Pure white perianth; broad, overlapping petals with a flat, lemon-yellow cup frilled deep red. 20 cts. each, \$1.50 for 10, \$15.00 per 100

HOMER. This variety is one of the better types of Poet's Narcissus. Perianth pure white; cup canary-yellow, rimmed bright red. Excellent variety for forcing because of the large size of the flower and length of stem. 15 cts. each, \$1.20 for 10, \$10.00 per 100

PHEASANT'S EYE. The original late-flowering Pheasant's Eye variety popular for gardens and naturalizing. Pure white flowers with orange cup, edged red. 15 cts. each, \$1.20 for 10, \$10.00 per 100

20 cts. each, \$1.50 for 10, \$12.00 per 100

Daffodils for the Home Polyanthus Narcissus (Bunch-Flowering)

We are offering three varieties of this splendid type of Narcissus which are now universally grown indoors in pots of fiber or soil as well as in pebbles and water.

The best method is to keep your bulbs in the containers in which they are shipped to you and to store them in a moderately cool, dry place. Plant different lots every 3 weeks from October 1 until March 1, and you can enjoy a constant succession of bloom.

CHINESE SACRED (*N. polyanthus orientalis*). Frequently referred to as the Chinese Sacred Lily. The flowers are similar to the variety Grand Soleil d'Or, except that the perianth is white while the cup is golden yellow.

Matchless Bedding Hyacinths

SPECIAL NAMED VARIETIES IN DISTINCT SHADES OF COLOR, TO FLOWER AT THE SAME TIME

Bulbs measure 6 to 7 inches in circumference

The Hyacinth chosen to represent each of the following shades of color is a variety which we have found from trials will be best in the three essential requirements: Best in its color; stoutest stem; largest truss of bells; so our patrons will know that we have avoided using varieties that are of weak stem and that do not support the blooms.

CULTURE. These Hyacinths should be planted from 6 to 10 inches apart and covered with at least 4 inches of soil from the top of the bulb. For beds or borders close to the conservatory or dwelling, 6 inches will make a fine display; but where the beds are planted to be viewed from a distance, they may be planted 10 inches apart. Hyacinths planted alternately with narcissi produce a most graceful effect, and for this combination 6 inches from bulb to bulb is also a very suitable distance.

Hyacinths, as well as narcissi, should be planted by November 1 in this latitude, as they are the better for early planting. Tulips may be planted up to December 1, weather permitting.

Lilies

We are likely to think Lilies are too fine for the amateur to grow because they are so beautiful and fragrant. However, there are many hardy thrifty varieties capable of withstanding conditions which overcome less beautiful flowers. Grow them in the border in small groups, with background plants, where their beauty has a suitable setting.

Outdoor Culture. Lilies planted outdoors should have a well-drained position where they will be shaded from very hot sun. Never mix manure in soil around Lilies; use S. & W. Co. Bulb Fertilizer or bonemeal. Many varieties of Lilies are "stem-rooters"—they develop roots on the stem up to 2 to 3 inches from the ground. These roots are voracious feeders and on them depend greatly the number and size of the flowers. When the buds appear give the plant a top-dressing of good rich soil on which they can feed freely. Spade over the ground thoroughly to a depth of 18 inches before planting Lilies. Put some sand under and around the bulbs and after covering protect with 6 to 8 inches of leaves or other litter.

AURATUM. Stately Lilies growing 3 to 6 feet high. One plant bears twenty or more large, fragrant flowers 8 to 10 inches in diameter, in August. White, spotted deep red, with a bright yellow band running through the center of each petal. Plant 9 to 12 inches deep. Stem-rooting.
\$1.10 each, \$10.00 for 10, \$95.00 per 100

CANADENSE FLAVUM. Giant sprays of nodding bell-like pale yellow blooms on 3 to 5-foot stems in July. Stem-rooting. Plant 8 inches deep in full sun or light shade. Keep roots cool with ground cover.

This noble and rare bulbous plant from Turkestan is one of the choicest subjects for the permanent hardy border. It thrives best in a well-drained, sheltered, sunny position, and prefers a deep, sandy loam to which has been added a liberal quantity of well-rotted cow manure. A covering of 4 to 5 inches of leaves or litter will be beneficial and will save the young shoots, which start early and are liable to be damaged by late frosts. It produces a tall, majestic flower stalk which rises from a crowded tuft of narrow leaves and is crowned by a flower spike 2 to 3 feet long, composed of closely set, bell-shaped flowers which are quite star-like in effect. The colors are tones of rose, yellow, and white. Excellent for cut-flowers indoors, lasting fully three weeks in water. We suggest that they be planted in groups of not less than three, better effects are created if planted in masses of six or twelve.

TO HELP YOU CHOOSE

Everyone enjoys the scent of Roses, and all our everblooming varieties are fragrant; sorts marked * have a pronounced perfume, and those marked ** even more so.

The number of petals indicates the doubleness of a Rose: one with 25 is a semi-double bloom; one with 75 petals would be heavy and tight. Many varieties with fewer petals are preferred for their buds.

Staigreen **LAWN SEED**

Best on Earth Since 1912

HIGH PURITY . HIGH GERMINATION . TIME-TESTED FORMULA
MAXIMUM FREEDOM FROM WEEDS . CONTAINS NO CRABGRASS

Don't Experiment—We've Done That For You

STAIGREEN is a modern seed mixture that makes a good lawn. In it are fine, strong, and permanent varieties, of high purity and high germination; all are as free from seeds of harmful weeds as modern machinery can make them. **STAIGREEN** contains no crabgrass (guaranteed).

The time-tested **STAIGREEN** formula is the result of years of experimenting and practical sowing on all types of soil. With it, many of the best lawns in the northern United States have been built. Under favorable conditions it will produce a deep-rooted turf, luxuriant, thick, and rich emerald-green, from early spring to early winter.

Chewing's Fescue is an important ingredient in the Staigreen formula. Being deep-rooted, and a robust grower in the heat of summer, it imparts to Staigreen a definite resistance to chinch-bug injury, drought, and summer scald.

Quantity of Seed to Purchase

	Sowing New Lawns Lbs.	Renovating Old Lawns Lbs.
200 sq. feet....	1	1½ to ¾
1000 sq. feet....	5	2½ to 4
Acre.....	200	75 to 125

These amounts will give satisfactory results under average conditions, but if time is not important, and if your soil is good and rich, they may be reduced.

They are sometimes doubled by experienced turf-makers, especially on sloping land.

SHADY PLACE LAWN SEED

A companion mixture to Staigreen and for use where heavy shade is a problem

A well-tried formula which includes grass varieties which are tolerant of shade, in proper proportion with other sorts which do well in full sunlight. So the mixture may be used with every confidence on both sunny and shaded areas, to produce a turf of high quality, uniform, springy, dense and medium-green in color. We have supplied this mixture to successful lawn makers for the past thirty-six years.

Lb. \$1.15, 2½ lbs. \$2.80, 5 lbs. \$5.50, 10 lbs. \$10.50, 25 lbs. \$25.00, 100 lbs. \$95.00. Delivered to your home

SEE PAGE 46H FOR OTHER LAWN MIXTURES

Autumn-Made Lawns are Best. Fall is also the most favorable time for renovating. Seed sown from August 15 to October 15 invariably grows well; thicker turf develops quickly under the influence of autumn rains and cool nights. You will have fewer weeds.

About Grass Seed Prices! Some increases have become necessary in Lawn Seed prices. Higher growing and harvesting costs and short crops have caused much higher values on such important turf grasses as Kentucky Blue Grass, Bent Grasses, Chewing's Fescue and White Clover. We have tried to absorb these increases but now find it necessary to pass on some of these to our customers, instead of revising our formulas and giving out mixtures that we do not consider the best to use. Grass seed represents only a small portion of the cost of constructing a lawn and the use of the right seed, and the best seed, will save much weeding and renovating expense.
